Research Data Planning and Management

John Brown, Research Services, University Library
Research Data Management

• What is it?
Research Data management is thinking ahead about how researchers collect, process, publish and store data over the whole research lifecycle.

• Why does Curtin care?
Australian Code for the Responsible Conduct of Research
Curtin Research Data & Primary Materials Policy

• Why should researchers care?
Assists
• The broader research community receives benefits

• Individuals
  • Better citations
  • Better connections
  • Better research outputs

Prevents
• Data loss – caused by both human and machine error
• Loss of research evidence
• Plagiarism/collusion concerns
Research Data Management

- What you can do to help
  1. 321 Backup – schedule it
  2. Open data publication
  3. Engage with the Data Management Plan

- What the library can do to help you help
  - RDM LibGuide
  - DMP small group workshops
  - DMP Tool Help document for using the DMP Tool
  - RDM Seminars
  - DOI minting for data publishing
  - Email us anytime
